Gary Nguyen is skilled in using advanced excel functions (VLOOKUPS, SUMIFS, COUNTIFS, Pivot tables) to perform financial & data analysis. He can also perform in-depth financial modeling with critical business drivers and incorporate Macro VBA in building financial calculators. Gary's statistics background allowed him to understand and perform practical statistical analysis experience for modeling, forecasting activities and to interpret statistical results. Gary showed great competence in using SQL and MS Access for querying large banking datasets in our course.

With his current spreadsheet and analytical skills, he can quickly learn and adapt to other BI tools (Tableau, Power BI, etc.) & enterprise software for business operations & analysis.

He is a good team-player and a great communicator He presented project deliverables' outcomes with his team in a clear and concise manner to stakeholders of various backgrounds.

I believe Gary will be a great addition to any team. His financial and spreadsheets modeling and verbal communication skills would be great assets for any team he works in.
